

Installation Guide

Model:

SmartGard - Family
(49001)

Contents of the Kit:

- Smartgard Module Model 49001 Module Logic
- Push Button
- 2 screw for fixing the key pad
- Electronic Lock Model 3260 MLBR SER44- Swing Bolt
- 3 screw to fix the lock
- Large Battery Box Model LGBR 4001 (Hoses 6 "C" type batteries)
- 6 batteries Duracell type C (1,5Vdc x6)

Description:

Smartgard Module

Screw to fix the module keypad

Push Button

Electronic Lock

Screw to fix the lock

Large Battery Box

6 Batteries Duracell type C

Below the steps for installation

1º STEP:

- Remove the cap pushing up on the tab indicated, in Figure 1; to remove plastic cover to get access to module logic
- Check the site for fixing the Smartgard Module ;
- The drilling for fixing the Smartgard Module should be Ø 3,3;
- Make a thread of Ø 5/32;
- Not fix the Smartgard Module

Figure 1

Drilling of
Ø 3,3

Thread of
Ø 5/32

2º STEP:

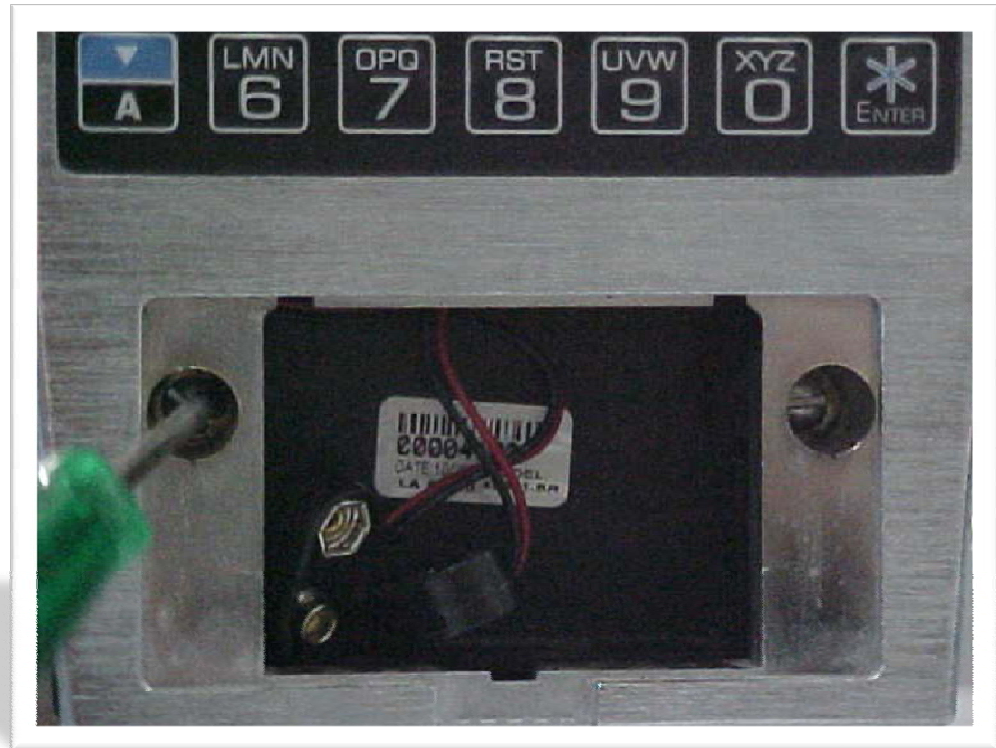

- Check the center between the two holes, moving 40mm up and drill a hole of $\varnothing 14$ in the safe;
- This hole will allow the passage of the cables. Through the safe.

3º STEP:

- Pass all cables through the Ø 14 hole made in the previous step;
- the screws provided to fix the module and make fixing the Module on the door of the safe;

Screw to fix the Smartgard
Module

4º STEP:

- Search the location for fixing the lock;
- The drilling for fixing the lock should be Ø 5,3;
- Make a thread of Ø 1/4.

Screw for fixid the lock

Fix the
screws

4º STEP:

Description of cables

1. Cable to the Power Supply;
2. Cable for the connection to lock;
3. Cable to the sensor door open / closed

5° STEP:

- Grab the push button and remove screw-nut, as shown in figure 1;
- The push BUTTON should be installed at the hinge of the door of the safe. Make drilling of $\varnothing 12$ at the hinge of the door of the safe;
- Conect the sensor cables in the push button, red and any of the black wires in the terminals, as shown in figure 2;
- Take the screw-nut that was removed and then affix the push BUTTON, as shown in figure 3.

DOOR OPEN

10° STEP: Battery Installation

- Grab the cable, batteries and the box of battery; (figure 01)
- Find the best place for fixing the battery box;
- Make the connection to the terminal of the battery cable, with the box of batteries, as illustrated in Figure 02;
- Install the batteries inside the box. On installation see positive and negative polarity described in the box.
- Make sure polarity is correct before proceeding.

11º STEP:

- After fixing the lock, make the connection terminals of the Smartgard Module in the lock.
 - To connect these terminals, press lightly on the connector for the electronic lock and plug them as shown in figure 01
- Attention: Do not force the disconnection of cables , damage might occur because of the cable or contact with the pins!**

Figure 01

12° STEP:

- Electrical Ratings

- Smartgard Module Logic
- Primary DC voltage supplied by LGBR 4001 battery box = (1,5VDC x 6 batteries) = 9VDC

- Stand by Battery

- Smartgard Keypad = (2 x 9VDC batteries) parallel configuration

- Make sure polarity is appropriately verified before installation

- Ambient temperature 0° to 49°C

- Humidity – 85±/5 percent

•Thanks!
